The Architectural Range

by **FERARRO**

The Architectural Range by Ferraro has been designed for the modern home. After extensive research, Ferraro realised that new architecturally designed homes didn't want a big bulky rose behind the handle, but handles that subtly accentuate and enhance their surroundings.

So Ferraro has developed the Architectural Range with four modern stainless steel handles, a 3mm thick *Minimo* sprung rose that suits the individual handles, with the finish to match. The rose sits neatly against the door creating a feeling of luxury, paired with a smooth, soft-close latch and ergonomic design to give you the best technical and aesthetical result possible.

Available in these Finishes:

Black ■ Stainless Steel ■

Stainless Steel Only ■

The Architectural Range Finished for New Zealand
